

---

Compositional analysis of the Residual Waste Deposited by  
Householders at Leicestershire Recycling and Household Waste Sites

---

**2009/10 Final Report**

**WastesWork**

## Executive Summary

---

This piece of work was commissioned by Leicestershire County Council to complement the waste analyses being carried out on samples of kerbside collected household waste, recycling and composting. The sampling at seven of the County's Recycling and Household waste Sites (RHWS) was carried out over four time periods to represent autumn, winter, spring and summer. The data from each season has been brought together in this report to provide the County Council with a greater understanding of the composition of the residual waste brought by households to RHWS.

The aims of this project were to:

- Identify materials that households are not recycling
- Identify potential new streams of recycling at RHWS
- Help focus resources to increase recycling rates and meet LATS requirements

For each season the fieldwork was carried out over a two week period by a team of three analysts.

The WastesWork team would like to thank staff at each of the RHWS for all the help that enabled this project to run smoothly and efficiently.

Fieldwork Manager: Barrie Knapp  
Lead Analysts: Charlotte Rayner, Darren Crowley  
Data: Madison Knapp  
Reporting: Sarah Knapp

## Key Points (KP)

---

### ***Background***

- KP.1 This was a four-season waste analysis project that mirrored the project carried out in 2007/2008. The focus was on the residual household waste disposed at Recycling and Household Waste Sites (RHWS) i.e. residual skips only.
- KP.2 Leicestershire has a total of 14 RHWS; the same seven were included in the surveying each season and were those surveyed in 2007/2008.

### ***Method***

- KP.3 As in 2007/2008 each RHWS was surveyed on a weekday and a weekend day. For each site and on each day approximately 40 visitors were sampled. Only those visitors intending to use the residual skips were intercepted. Each visitor was asked for their postcode. They were then asked to place their waste into a specific skip. Once the 40 visitors had been intercepted a cover was placed over the skip ready for it to be transported to Whetstone RHWS, where the sample would be hand sorted.

### ***Results***

- KP.4 In autumn 560 visitors were surveyed and a total of 11 tonnes of waste was sorted. In winter 562 visitors were included in the sampling and a total of 9.5 tonnes of waste was hand sorted. In spring 560 visitors were surveyed and 8.5 tonnes of waste sorted and finally in summer 562 visitors were surveyed and 8.7 tonnes of waste was hand sorted.
- KP.5 The information box below shows the weights per visitor for autumn 2009, winter, spring and summer 2010. The figures in brackets show the equivalent data from the 2007/08 surveys. The results from all seasons suggest that the weights per visitor have decreased compared to 2007/08 data.

	Average kg for week day visitors	Average kg for weekend visitors
Autumn	18kg [21kg]	21kg [20kg]
Winter	15kg [24kg]	19kg [21kg]
Spring	15kg [22kg]	16kg [20kg]
Summer	16kg [19kg]	15kg [23kg]

KP.6 Over the four seasons the three dominant materials in terms of weight were black sacks, carpet/underlay and non-reusable furniture. These three elements made up over 50% of the total weight. In the previous study DIY rubble had also been dominant in terms of weight but in this latest series of surveys weights for DIY rubble were much lower. The weights for carpets/underlay and non-reusable furniture have remained fairly similar to the 2007/08 surveys but the figures for black sacks have significantly reduced.

	Black sack waste	Carpet/underlay	Non reusable furniture	DIY Rubble
Autumn	2.2T [3.5T]	2.5T [1.5T]	1.1T [0.9T]	0.3T [1.1T]
Winter	2.1T [2.5T]	1.6T [1.2T]	1.0T [1.3T]	0.3T [0.6T]
Spring	1.8T [2.0T]	1.1T [1.8T]	1.0T [1.2T]	0.5T [0.4T]
Summer	1.6T [2.3T]	1.9T [1.7T]	0.9T [1.1T]	0.3T [0.9T]

KP.7 The postcodes provided by visitors suggested that householders tended to use the site closest to them. In 2007/08 and 2009/10 visitors to Whetstone RHWS appeared to come from a wider area. Postcodes for Whetstone included LE2, LE3, LE8, LE9 and LE19.

KP.8 The information box below shows that concentrations of potentially recyclable material in the residual waste skips were fairly similar to those seen in 2007/08 (these figures exclude the materials in the black sacks).

	Concentration of potentially recyclable material 2009/2010	Concentration of potentially recyclable material 2007/2008
Autumn	14%	14%
Winter	16%	16%
Spring	14%	22%
Summer	16%	17%

KP.9 In autumn 48% by weight of material brought to the sites would be classified as biodegradable. In winter the figure was 51%, in spring 49% and in summer 48%.

KP.10 Over the four seasons 7.7 tonnes of black sack waste was found in the sampled residual waste skips. In 2007/08 the overall weight of black sacks

in the samples was 10.3T. The final information box shows the concentrations of potentially recyclable material, biodegradables and food waste found in the black sacks.

	Potentially recyclable %	Biodegradable %	Food %
Autumn	29%	67%	37%
Winter	28%	66%	37%
Spring	30%	69%	40%
Summer	26%	67%	41%
Average for 2009/10	28%	67%	38%
Average for 2007/08	31%	65%	35%

# 1. Introduction

---

## ***Background***

Recycling Household Waste Site (RHWS) waste is the second largest household waste stream after kerbside collected household waste in Leicestershire. Leicestershire County Council has 14 RHWS, from which seven sites were selected for surveying. These were the seven sites that had been included in the sampling in 2007/08.

Although the Council holds extensive data on materials recycled at each of the sites and has tonnage data for the residual waste, less is known about the composition of the residual waste, the quantities of material that site visitors could be recycling instead of throwing into the residual waste skips and additional materials that could be diverted. This report presents the results from surveys that were carried out during 2009/2010.

In addition to the surveying carried out at the seven RHWS, sampling had also been carried out on kerbside collected household waste and recycling. The results for that part of the project are included in a separate report.

All phases of the RHWS fieldwork were carried out over a two week period by a team of three analysts. The seven sites covered were:

<b><i>District</i></b>	<b><i>Location</i></b>
<i>Hinckley &amp; Bosworth DC</i>	<i>Barwell</i>
<i>North West Leicestershire DC</i>	<i>Coalville</i>
<i>Charnwood BC</i>	<i>Loughborough</i>
<i>Harborough DC</i>	<i>Market Harborough</i>
<i>Melton BC</i>	<i>Melton Mowbray</i>
<i>Oadby &amp; Wigston DC</i>	<i>Oadby</i>
<i>Blaby DC</i>	<i>Whetstone</i>

At each site sampling was carried out on both a weekday and a weekend day; this was done in order to encompass a cross-section of the site users.

## ***Sampling***

On the sampling collection days, at approximately 5-minute intervals visitors approaching the residual waste skips were stopped and asked if they would consent to being included in a survey. If the person agreed they were asked for their postcode, and then instructed to place their waste into a specific skip. If the visitor had any materials

that they intended to recycle they were asked to continue with this. Approximately 40 visitors were sampled per day per site.

### ***Analysing the waste***

Once the waste from 40 visitors had been collected, a cover was placed over the skip ready for it to be transported to Whetstone RHWS, where the hand sorting would take place. In total the waste from each visitor was hand sorted across 79 material categories.

## **2. Overall results for the Leicestershire**

---

### ***Visitors***

Over the four seasons the residual waste from 2244 visitors was surveyed. The figure for 2007/08 was 2224. As in 2007/08 in most cases, the surveyed visitors appeared to be using the site that was closest to their home. Only the Whetstone RHWS appeared to have a wider catchment area. In each season a small percentage of visitors were unable to provide a postcode.

**Table 2.1: Number of visitors by area of origin (postcode)**

***Weight of waste***

Table 2.2 and Figure 2.1 below give the average weights of the principal waste types found in the residual waste on weekdays and weekends. They also show the comparison between autumn, winter, spring and summer. The figures show that the weights per visitor have fallen over the sampling period from 19.5kg per visitor in autumn to 15.5kg in summer. It has been observed that, as sites become more sophisticated and householders have been able to separate their waste on site, the weight of residual waste per visitor has significantly decreased. In the 2007/08 surveys the average figure for each season was 21kg. The recent waste analysis programmes carried out by WRAP in Scotland and Wales 2009 showed that 19kg was a fairly average figure.

**Table 2.2 Average weights of waste for winter and autumn**

**Figure 2.1: average weights for each season**

Higher weights of waste were seen in autumn compared to winter, spring and summer, in addition the first three surveys suggested that higher weights arose at weekends compared to weekdays but this was not seen in summer and there was similarly no consistency in the 2007/08 figures.

The following two figures show the results for each of the sampled sites for each season on weekend and weekdays.

Figure 2.2: Weight of waste per visitor at each site

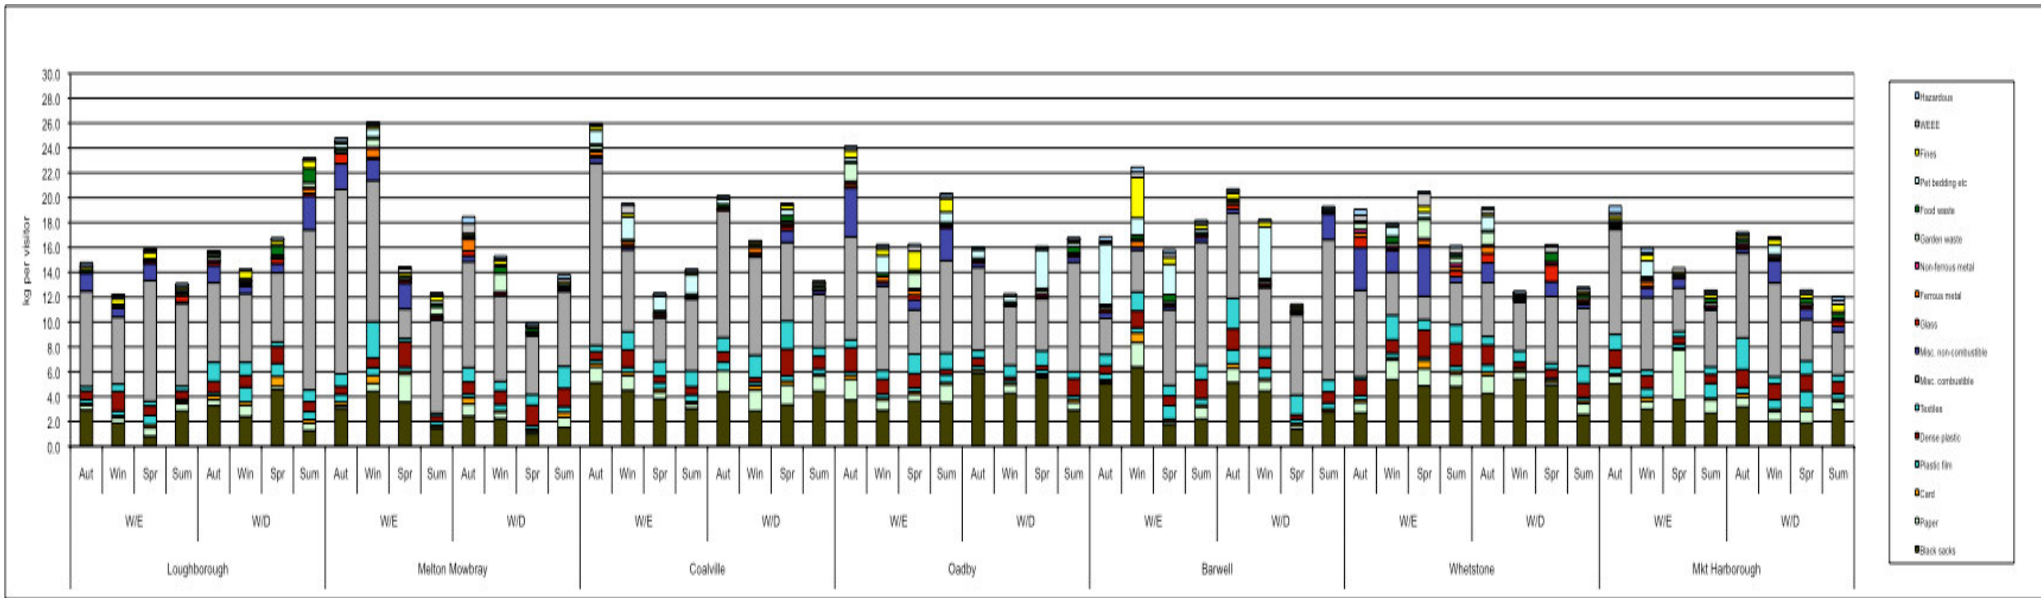

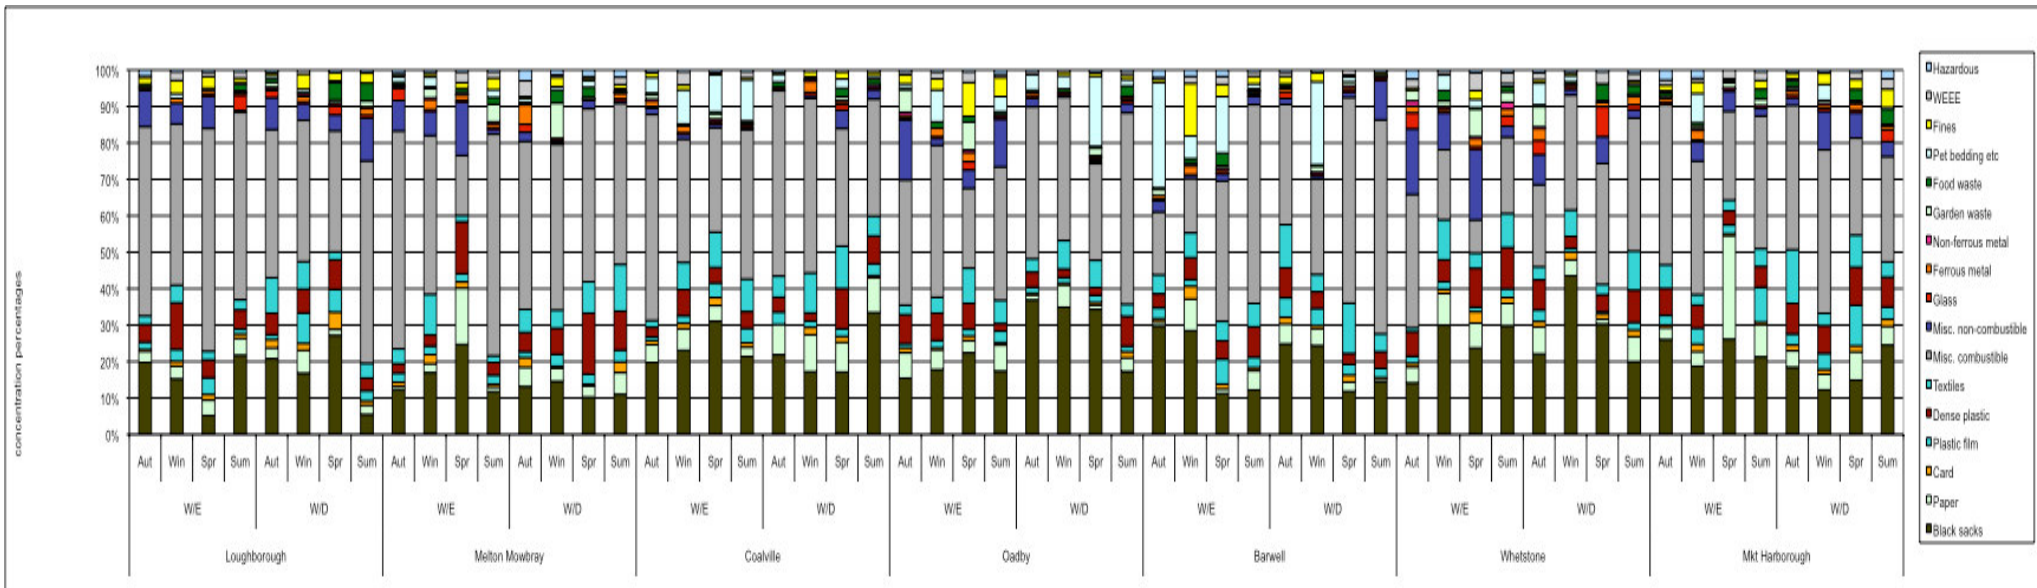

Figure 2.3 below shows the percentage concentrations for each of the principal categories of waste at the 7 different RHWS, for the autumn, winter, spring and summer surveys.

**Figure 2.3: Concentrations for each primary category of waste**

Over all four seasons the results have shown that site users are throwing the correct materials into the residual skips and diverting other materials into the appropriate containers. The autumn 2007 survey highlighted that DIY rubble made up a considerable element of the waste stream, but this was not the case for the 2009/2010 surveys. Aside from black sacks, carpet and underlay made up the greatest weight of material in all seasons.

The Waste and Resources Action Programme (WRAP) have commissioned a number of projects looking into the feasibility of recycling carpet and underlay. There is also a carpet recycling trade association, which is working to increase carpet recycling across the UK. As carpet and underlay currently make up between 12% and 23% of the total weight in the residual skips it may be appropriate to investigate further opportunities to divert this material.

A large amount of black sack waste is being brought to the RHWS, although the tonnage in 2007/08 was significantly higher. [NB a sack is only classified as a black sack if it contains food waste, if the sack does not contain food it is sorted fully.] These sacks often contain material that the visitors could have diverted into their kerbside recycling schemes or the schemes on site. In autumn 29% of the weight in the sacks was recyclable, in winter 28%, in spring 30% and in summer 26%.

The concentration of black sacks found in the waste was consistently 20% of the total weight. Table 2.3 and figure 2.4 show the contents of the black sacks brought to each of the sites on weekdays and weekends. The largest concentration of material in each sack was food waste followed by paper and card.

Figure 2.4: Contents of the black sacks sorted for each site on a weekday and weekend day

### ***Key overall results for autumn***

- 560 visitors participated in the survey
- 560 visitors brought 11 tonnes of material for disposal
- The average weight of waste per visitor was 19kg
- Equal weights of waste were brought by the visitors on a weekday and a weekend day
- Materials with the greatest weights were:
  - Carpet and underlay
  - Non reusable furniture
  - Black sack waste
- Kitchen waste in black sacks made up 21% of the total weight of the combined samples. 29% of the black sack waste could have been recycled; this does not include food waste
- 14% of the total weight of waste was potentially recyclable. Cardboard and reusable clothes dominated the weight
- 46% of the waste brought to the average Leicestershire County Council RHWS would be classified as biodegradable.

### ***Key overall results for winter***

- 562 visitors participated in the survey
- 562 visitors brought 9.5 tonnes of material for disposal
- The average weight of waste per visitor was 17kg
- Week day visitors had lower weights of waste than the weekend visitors.
- Materials with the greatest weights were:
  - Carpet and underlay
  - Non reusable furniture
  - Black sack waste
- Kitchen waste in black sacks made up 22% of the total weight of the combined samples. 28% of the black sack waste could have been recycled; this does not include food waste
- 16% of the total weight of waste was potentially recyclable. Textiles and reusable furniture dominated this weight
- 51% of the waste brought to the average Leicestershire County Council RHWS would be classified as biodegradable.

### ***Key overall results for spring***

- 562 visitors participated in the survey
- 562 visitors brought 8.5 tonnes of material for disposal
- The average weight of waste per visitor was 15kg
- Week day visitors had lower weights of waste than the weekend visitors.
- Materials with the greatest weights were:
  - Carpet and underlay
  - Non reusable furniture
  - Black sack waste
- Kitchen waste in black sacks made up 21% of the total weight of the combined samples. 30% of the black sack waste could have been recycled; this does not include food waste
- 14% of the total weight of waste was potentially recyclable. Textiles and reusable furniture dominated this weight

- 49% of the waste brought to the average Leicestershire County Council RHWS would be classified as biodegradable.

### ***Key overall results for summer***

- 562 visitors participated in the survey
- 562 visitors brought 8.7 tonnes of material for disposal
- The average weight of waste per visitor was 16kg
- Week day visitors had slightly higher weights of waste than the weekend visitors.
- Materials with the greatest weights were:
  - Carpet and underlay
  - Non reusable furniture
  - Black sack waste
- Kitchen waste in black sacks made up 18% of the total weight of the combined samples. 26% of the black sack waste could have been recycled; this does not include the food waste.
- 16% of the total weight of waste was potentially recyclable. Reusable furniture dominated this weight
- 48% of the waste brought to the average Leicestershire County Council RHWS would be classified as biodegradable.

### ***A comparison of the key results with the 2007/08 data***

	<b>2009/2010</b>	<b>2007/2008</b>
Visitors sampled	2244	2224
Weight of waste sampled	38T	48T
Average weight per visitor	17kg	21kg
Materials with the greatest weights	Carpet and underlay Non reusable furniture Black sack kitchen waste	Carpet and underlay Non reusable furniture Black sack kitchen waste DIY rubble
Concentration of kitchen waste black sacks	20%	22%
Recyclable materials in the black sacks	28%	31%
Biodegradable materials in the black sacks	67%	65%
Potentially recyclable materials in total sample	15%	17%
Biodegradable material in the total sample	49%	46%

## **Appendix A Average results for autumn 2009, winter, spring and summer 2010**

Table A1: Average for all 7 sites on a weekday - autumn

Primary category	Sub-category	October week day average				
		Weight	Concentration %		kg per visitor
